

Reviews for *Drugging Our Children*

"This is a powerful indictment of the American penchant for prescribing cocktails of dangerous drugs for troubled children instead of dealing with the underlying problems. Anyone who is worried about this nation's children—and we all should be plenty worried—will find the book eye-opening."—Marcia Angell, MD, Senior Lecturer in Social Medicine, Harvard Medical School, Former Editor-in-Chief, *New England Journal of Medicine*

"Aggressive drug company marketing has promoted the widespread overuse of antipsychotic drugs with potentially harmful side effects. This valuable book provides a powerful pushback."—Dr. Allen Frances, Chair, DSM-IV Task Force, Professor Emeritus, Duke University, School of Medicine

"The over-use of anti-psychotic drugs with America's children has been one of the leading scandals in mental health for years, and this outstanding volume explores every angle of it, from its history and causes to some solutions in the best interests of children. Parents and professionals alike need to read this book."—Frank Farley, PhD, L.H. Carnell Professor, Temple University, Philadelphia; Former President, American Psychological Association.

"*Drugging Our Children* is compelling and disturbing. It is a must-read for all health care professionals. This enlightening well-researched volume will help to protect our children from maltreatment and abuse from inappropriate use of medication. I highly recommend it—for parents as well as professionals."—Dr. Alvin Poussaint Professor of Psychiatry, Harvard Medical School
